

## **Aeration, Lime & Overseeding**

It is a good time to aerate, lime and overseed your lawn. An aerator is a machine that pokes holes or plugs into the lawn which allows air, water and nutrients to penetrate to the root system where it is used by the plant. Lime is applied to reduce acidity in the soil which is generally caused by our rains. This allows our fertilizers to be released and used by the plant more freely. Overseed is done to help thicken up the turf and allow better root growth.
